

LegalEase: AI-Powered Legal Document Generator

Phase 02: Requirement Analysis Phase

Project Phase Document

Prepared for: LegalEase AI Project

Team: Srija M (Team Lead), Srivarshini M S, Subashree G, Subiksha M

1. Phase Objective

To identify the functional, technical and user-interface requirements needed to implement LegalEase.

Functional Requirements

Collect user information and document requirements; generate legal-document text; display the generated result; allow the result to be exported into a document format.

AI Requirement

Integrate a Generative AI model so that the application can create document content from structured user inputs.

Frontend Requirement

Provide a simple Gradio-based interface for entering details, generating documents and viewing the result.

Backend Requirement

Provide a FastAPI backend with API routes for application operations and AI/document-processing integration.

Configuration Requirement

Keep the AI API key in an environment configuration file rather than hard-coding it in source code.

Usability Requirement

The interface should provide clear labels, understandable inputs and useful error messages.

Key Activities / Outputs

No.	Deliverable / Output
1	Functional requirements
2	Non-functional requirements
3	AI/API requirements
4	Frontend requirements
5	Backend requirements

No.	Deliverable / Output
6	Configuration and security requirements

Project Note

LegalEase is an AI-powered document-generation project. The generated material is intended as a draft and should be reviewed by an appropriately qualified person before being relied upon for legal purposes.
