

LegalEase: AI-Powered Legal Document Generator

Phase 03: Project Design Phase

Project Phase Document

Prepared for: LegalEase AI Project

Team: Srija M (Team Lead), Srivarshini M S, Subashree G, Subiksha M

1. Phase Objective

To design the overall architecture, modules, data flow and user interface of LegalEase before implementation.

Architecture

LegalEase is organized into a frontend layer, backend/API layer, AI generation layer and document-export utilities.

Frontend Design

A Gradio interface is used to collect document-related inputs and present generated content to the user.

Backend Design

FastAPI provides the application API and separates request handling from AI-generation and utility logic.

AI Layer

The AI generation module prepares the user requirements as a prompt and sends them to the configured Gemini model.

Document Layer

Document-export utilities convert generated content into downloadable document output.

Data Flow

User input → Gradio frontend → FastAPI route → Gemini generation → generated legal document → display/export.

Key Activities / Outputs

No.	Deliverable / Output
1	System architecture
2	Module design
3	UI flow
4	API flow

No.	Deliverable / Output
5	AI integration flow
6	Document export flow

Project Note

LegalEase is an AI-powered document-generation project. The generated material is intended as a draft and should be reviewed by an appropriately qualified person before being relied upon for legal purposes.
