

LegalEase: AI-Powered Legal Document Generator

Phase 05: Project Development Phase

Project Phase Document

Prepared for: LegalEase AI Project

Team: Srija M (Team Lead), Srivarshini M S, Subashree G, Subiksha M

1. Phase Objective

To implement the planned LegalEase application using the selected frontend, backend, AI and document-generation components.

Project Setup

The project is organized with separate frontend and backend areas and a Python virtual environment for dependencies.

Backend Development

FastAPI is used for the backend application and API routes. The backend is run with Uvicorn.

Frontend Development

The user interface is implemented with Gradio so users can enter details and interact with the generated document.

AI Integration

The Gemini-based generator module uses the configured GEMINI_API_KEY and model settings to generate document content.

Document Export

Utility functions are used to create document outputs from the generated content.

Integration

The frontend, backend, AI generation and document export components are connected into one application workflow.

Key Activities / Outputs

No.	Deliverable / Output
1	Working source code
2	Frontend UI
3	Backend API
4	Gemini integration

No.	Deliverable / Output
5	Document export utility
6	Integrated application

Project Note

LegalEase is an AI-powered document-generation project. The generated material is intended as a draft and should be reviewed by an appropriately qualified person before being relied upon for legal purposes.
